DETAILED ACTION

Amendment

1. Receipt is acknowledged of the amendment filed on June 29, 2004. Claims 1, 2, 6, and
5 11 are canceled, and claims 7, 10, 12, 15, and 19 were amended. Currently, claims 3-5, 7-10, 12-
19 remain for examination.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the
10 basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed
in the United States before the invention by the applicant for patent or (2) a patent granted on an application for
15 patent by another filed in the United States before the invention by the applicant for patent, except that an
international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this
subsection of an application filed in the United States only if the international application designated the United
States and was published under Article 21(2) of such treaty in the English language.

3. Claims 3, 4, 7, 8, 10, 12, 14-16, 18 and 19 are rejected under 35 U.S.C. 102(e) as being
20 anticipated by Tsi et al. (US 6,213,399, hereinafter “Tsi”).

Re claims 7, 3, 4, 10, 15, 12, 14, 16, 18, and 19, Tsi teaches a multi-channel scanner
comprising a plurality of input channels (see figures 4, 6, and 9; see abstract; col. 4, lines 7+).

As illustrated in figure 9, detectors D1 and D2 will produce respective signals, which are
digitized by digitizers and fed into a common decoding unit 47 (col. 10, line 41 – col. 11, line
25 34).

Re claim 8, each channel includes signal conditioners 137, 133, and digitizers 138 and
134 (see figure 9).

Allowable Subject Matter

4. Claims 5, 9, 13, and 17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base
5 claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: the claims are directed an optical reader comprising a plurality of channels. The claims also recite the method of scanning objects with a plurality of photodetectors associated with respective
10 channels. As indicated in paragraph 3 above, a barcode scanner comprising a plurality of channels is known in the art. However, the cited references, taken alone or in combinations, fail to suggest or teach an optical reader comprising a plurality of channels wherein collected information from a plurality of channels are provided in alternating sequence, or use of FIFO buffer as set forth in the claims.

Conclusion

I. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Fazekas (US 5,635,700) disclose a bar code reader comprising multi-channel light collection. Applicant is respectfully suggested to review cited reference.
